

“All disease begins in the gut!”

This idea of protein spread and immune therapies so this work goes back to the turn of the century when there was a very famous neuropathologist in Germany called High K. Brock, who said “when he looked at hundreds of brains from people, some had pd and some who didn’t He stained for the protein Alpha-synuclien and derived it started in the gut and worked up the spinal cord to the brain.

Ten years ago patents were transplanted with dopamine cells derived from fetuses. These were transplanted into the brains with people with Parkinson’s disease. Ten years then after these patents died. They found the older alpha-s had infected the younger transplanted cells. The research showed, alpha synuclein starts in our gut mutating by folding, then works its way up the spinal column into the brain. Through a four step process it becomes Lewy body’s that negate dopamine in the substantia nigra. What possible do we eat and enough to create this mutation? The answer I herbicides absorbed becoming GMOs.

“All disease begins in the gut!”-- a quote attributed to the Ancient Greek physician Hippocrates nearly 2500 years ago. There is so much Blatant evidence this is where Alpha-Synuclin folds. Glyphosate’s from GMOs that also start in the gut. Together they work their way up the spine onto the Substantia Nigra part of the brain. The mutation then becomes Lewy bodies and, theoretically, destroy dopamine. Now you have Parkinson’s. s conjecture, but I believe it is what the industrial war complex covers up! (Dose GMO foods equal PD?) I have ask myself, why the cover-up? The obvious is corporate profits but no in this Metrics it is only 20%. The 80% is from Friedrich Nietzsche said “out of chaos comes order” in the medical world it translates into “trash the health of the civilization to create a government that rules from the top down; Authorities.This became revelatory to me in 2007. I entered a law suit as Friend of the court in Logan County Kansas. Motion was to stop laws forcing ranchers to poison prairie dogs and it was getting into the food chain of animals and humans. (case No 2007-CV-.1 See exhibit A)

Animal Behaviorist Dr. Slobodchikoff of Northern Arizona University says, "Prairie dogs can talk." (From the **Albuquerque Journal The Associated Press Dec. 3 2004**) He maintains that prairie dogs can convey complex information through a language more sophisticated than that of many other animals that have been studied. Slobodchikoff has documented more than 100 prairie dog words. From his observation tower on the edge of a prairie dog colony outside Flagstaff, Slobodchikoff operates a directional microphone, a tape recorder and a video camera. From this vantage point, he can spot intruders, such as hawks, cats, dogs, and men and he can record the alarm calls these potential threats trigger in the prairie dogs

There is strong evidence that prairie dogs have an awareness of the existence of God as their creator. They have a form of praise and worship. Is the human race the only creation on earth which have a awareness of God? The apostle John had a vision from God of what heaven would be like. John wrote in Revelation 5: 11-14: " In my vision, I heard the sound of an immense number of angels gathered around the throne and **the animals** and the elders; there were thousand times ten thousand of them ...shouting, The lamb that was sacrificed is worthy to be given power, riches, wisdom, strength, honor, glory and blessing. Then I heard all the living things in creation---everything that lives in the air, and **on the ground and under the ground** and in the sea crying, 'To the one who is sitting on the throne and to the lamb, be all praise, honor, glory and power, for ever'"

This is how our research shows the way Rodent poison enters the animal food chain.

According to Larry Haverfield of Russell Springs Kansas, Black Diamond paid the state \$140. Then they took a few tests and got a license permitting them to poison Prairie dog holes. Black Diamond then hired a bunch of locals, and gave them four wheelers. These recruits dumped the poison in and around the holes and anywhere else so to make them look like they are doing their job. Well they got busted and had to pay a fine of \$2800.00 and they were sent back to Wyoming to muck up another state's food chain. The ranchers are being jack booted by the county and into paying \$20 or \$30 dollars per acre, when the

rancher can buy poison in Wynona, Kansas spread it himself to keep the county off his back.

Being forced to poison their own land, and being billed for this action by the county has caused the farmers to become annoyed with the system. They then created bait stations which are PVC pipes filled with poison grain. Can one imagine what can happen to the 200 other animals and cattle when we know these pipes are open to any animals that can get near them? Though ignorance this is been going on in several states for years. Before December 19 of 06 the pets just died and it was diagnosed as joint weakness.

December 19 and December 29 of 06 is where the Pet food poisoning really started.

Kansas has two of the worst blizzards in its history. Because the snow did not melt the cattle were kept from grazing for 90 days

The hungry cow or cows found one of many bait stations filled with poison grain. Like the Prairie Dog they ate and were filled and fell over dead.

The snow melted and the rendering truck picked up the frozen cattle, took it their rendered plant, then sold it sold it to Menu Foods of Emporia Kansas Menu Foods which made the frozen cattle into 95 different Dog foods which caused the recall of 60 million cans of dog and cat food and a nation filled with burring the dead pets. The American Trail Foundation has filed Pesticide Complaint report with Jerry Wilson of Kansas department of Agriculture on at least eight different bait stations. Jerry Wilson personally told me that unless a complaint is personally signed, no investigation will be done with the Department of Agriculture. In other words "who cares about grama dying of kidney failure because she ate cow meat, sick from rat poison." There is too many people in the world, is their religion! Jeffrey Smith and his team of scientists at the Institute For Responsible Technology; have stated the following.

"Even Tiny Amounts of Glyphosate Can Cause Harm Research studies have shown that glyphosate residue on food may have damaging effects on health. Animal studies have shown:

- 0.1 Parts Per Billion (PPB) alters the gene function of over 400 genes in the liver and kidney of rats and causes non-alcoholic fatty liver disease.
- 10 PPB shows toxic effects on the liver of fish.
- 700 PPB causes alterations of kidneys and liver in rats.
- Chelator—it binds with minerals making them unusable by the body.
- Antibiotic—it preferentially kills beneficial gut bacteria, rather than pathogenic forms.
- Endocrine disruptor—at medium and doses, it can disrupt hormones, including the sex hormone balance.
- Mitochondrial toxin—potentially damaging the energy source of our cells.
- Teratogen—leading to birth defects.
- Probable Human Carcinogen—classified by the World Health Organization’s top cancer committee. There are Many Opinions as to How Much is Safe?
- Glyphosate safe levels in food and water are the subject of much debate — and insufficient research.”

Remember the three great lies. The check is in the mail, I will respect you in the morning and I work for the government and I am interested in your health.

IN THE DISTRICT COURT OF LOGAN COUNTY KANSAS **Exhibit A**

**THE LOGAN COUNTY
BOARD OF COUNTY
COMMISSIONERS
Plaintiff**

Case No 2007-CV-1

**Larry and Elizabeth
Haverfield
Robert G. Barnhardt
Maxine Blank
Dixie Surratt
Donald and Lillian
Becker
Defendants**

Pursuant to K.S.A. 60

**NEW INFORMATION TO
AMENDED PETITION TO
FILE MOTIONS AND
BRIEFS OF AMICUS CURIAE**

COMES NOW the petitioner requesting this court to grant the petitioner Amicus Curiae for the following reasons:

- A. That the petitioner filed an Amicus Curiae petition on February 7th of 2007. Neither plaintiffs nor the defendants have filed an objection or any motion pertaining to The American Trail Foundation Request.**
- B. That if the plaintiffs or the defendants had any objections, then it would have been legal protocol to file an answer within ten days.**
- C. That the petition is being filed on behalf of the Prairie Dogs, and two hundred other animals who have no voice to speak out in their own defense. In addition this petition reminds the public of the of the well founded circumstantial evidence, that leads to the conclusion, of several hundred personal pets that have also been poisoned due to rat and or rodent poison. The misuseage of Bait stations, poisoned grain in open fields, enters the food and water chain.**

(See affidavit of research and exhibits attached)

D. In theory, the cost of having the county distribute Rodent poison over every acre in Logan county alone would be over 11 million Dollars. The ranchers pressured by Logan County enforcement of a 98 year old Kansas Statute (KSA 80-1202).

These Ranchers are not wanting to pay the county in order to save overhead costs in an already financial struggling business. Reacting to the “ jack boot” to poison their prairie dogs, they are then distributing rat and rodent poisoned grain, found stored in the barn, without proper understanding of usage. The Logan county commissioners are also guilty of poisoning the food chain. They contracted with Black Diamond of Buffalo, Wyoming. Black Diamond was fined \$2800.00 by EPA for placing poisoned grain in open range. (Kansas Department Agriculture Jerry Wilson was chief investigator. (pheasant@ruraltel.net)

E. The son of one of the Logan County commissioners is a licensed contractor to poison prairie dogs. The enforcement of KSA 80-1202 by county commissioners is in part a vested financial interest and should be taken into consideration by this Court, as to the motives of the Plaintiffs.

On behalf of the American Trail Foundation, the petitioner asks to be the voice to this court, for all four legged creatures, not having state nor federal constitutionality.

We respectfully request this court to grant Amicus Curiae to the said Petitioner.

**Jeffrey J Harsh Pro Per
4/2/07**

See petitioner’s *affidavit* of many months of research and development, on how rodent poison has entered the food chain, killing his personal Dogs and causing the recall of 60 million cans of pet food, within the last ten days.

CERTIFICATE OF SERVICE

I Jeffrey Harsh, do hereby certify that on 4/02/ 07, I have sent by US mail, a original copy of the above to Andrea M. Wyrick County Attorney, 300 Court av. Colby KS 67701.

AFFIDAVIT

Before me, the undersigned notary, on this day, personally appeared Jeffrey J. Harsh of the American trail Foundation, a person whose identity is known to me.

After I administered an oath to him upon his oath he said:

My name is Jeffrey J. Harsh. I am capable of making this affidavit; the facts stated in this affidavit are within my personal knowledge and investigation.

The following seven pages of information, which follows the notary public signature, is true and correct to the best of my knowledge.

Jeffrey J. Harsh
